

MOHAMMED BENAMAR

FULL-STACK / SOFTWARE ENGINEER

SUMMARY

Full-stack software engineer with a strong focus on Python and data: building pipelines that pull structured information out of messy sources and turn it into something usable. Hands-on experience with HTML parsing, regex-based extraction, REST APIs, and JSON data, plus a working project using LLMs for automated extraction (Retrieval-Augmented Generation). Comfortable picking up new tools and APIs quickly, and I ship what I build — solo, end to end, from back-end logic to front-end interfaces.

CONTACT

Casablanca-Settat

EDUCATION

1337 (42 Network) – UM6P
Coding School
Computer Science — Ben Guerir
2025

Faculty of Law, Economics and Social Sciences
Foundation year — Meknes
1 year

TECHNICAL SKILLS

- Python
- Regex / Pattern Matching
- HTML Parsing
- REST APIs
- JSON / Data Structures
- SQL
- Data Pipelines / ETL
- Web Scraping Fundamentals
- LLM-Assisted Extraction
- Git / GitHub
- Shell Scripting
- C
- Algorithms
- Linux

LANGUAGES

Arabic — Native
English — B2
French — B2

PROFESSIONAL EXPERIENCE

- **AI Developer — MindX Challenge × OCP Group**
EcoEnergy Pioneers / OCP Group — Casablanca Dec. 2025 – Mar. 2026
 - Built a data pipeline for an industrial IoT + Machine Learning platform: ingested raw sensor data, cleaned and transformed it, and fed it into prediction / anomaly-detection models — an ETL workflow end to end.
 - Worked with real-time data caching and structured JSON outputs to keep the dashboard interface fast and reliable.
- **Freelance Web Developer**
Self-employed 2024 – Present
 - Built and integrated REST APIs and data-driven features into client websites, handling JSON data and HTML/DOM structures directly.
 - Worked independently across the full stack, learning new tools and libraries quickly to match each project's requirements.

PROJECTS

RAG Against the Machine
Python · LLM / Retrieval-Augmented Generation
Built a Retrieval-Augmented Generation system for codebase Q&A: indexed and chunked source data, built the retrieval logic, and used an LLM to extract and generate accurate answers from unstructured content — the same kind of LLM-assisted extraction pipeline referenced in this role.
Live: projects.intra.42.fr/projects/rag-against-the-machine

Call Me Maybe
Python
Built a system that translates natural-language prompts into structured, typed function calls — hands-on work with turning unstructured input into clean, structured JSON output.

SCADA-IA Platform
Python · Scikit-learn / TensorFlow · IoT
Industrial energy & water monitoring: processed and transformed sensor data streams, trained ML models for consumption prediction and anomaly detection, with a real-time dashboard.
